REVISED LABEL DATA SHEET

PRODUCT NAME:  Extinguish Professional Fire Ant Bait

EPA REGISTRATION NUMBER:   2724-475

LABEL COMPONENT NUMBER(S) ATTACHED:  37963A and 37965B

REVISIONS INCLUDE:

1. Revised Wellmark logo and added street address to the registrant information.
2. Added Central Garden and Pet logo.
ACTIVE INGREDIENT:
(S)-Methoprene (CAS #65733-16-6) .............. 0.5%
OTHER INGREDIENTS: .................................... 99.5%
TOTAL: ...................................................... 100.0%

NEWT WEIGHT: 2.5 LBS (1.14Kg)

KEEP OUT OF REACH OF CHILDREN
CAUTION See back panel for additional Precautionary Statements

• Eliminates Fire Ant Colonies
• Stops the Development of New Mounds
• No Withdrawal Period or Grazing Restrictions on Treated Areas
• Can be Used Around Flowers, Shrubs, and Trees
• 1 Jug Treats 108,900 Square Feet with Precor® Insect Growth Regulator
**DIRECTIONS FOR USE**

**Extinction** PROFESSIONAL Fire Ant Bait (EXTINGUISH®) contains an insect growth regulator (IGR) with specific activity to the ants. EXTINGUISH® is based on the assumption that foraging fire ant workers take back the bait to the mound to feed to the queen. IGR's are different from conventional products which provide a direct kill to fire ants. IGR's work by affecting queen reproduction. The effects of the treatment may not be immediately evident.

**User Safety Recommendations:**

**Personal Protective Equipment:**
- Coveralls
- Chemical-resistant gloves
- Shoes plus socks

**FIRST AID:**
- Wash hands before eating, drinking, chewing gum, or using tobacco.
- Remove clothing immediately if pesticide gets on skin. Then wash thoroughly and put on clean clothing.
- After handling this product, immediately wash the outside of gloves before removing them; then rinse gloves and all other PPE. Immediatly wash thoroughly and change into clean clothing.

**INHALATION: PRINCIPAL HAZARDS:**
- Irritation.
- Avoid contact with eyes or clothing. Wash thoroughly with soap and water.
- Stay out of smoke.
- Do not use this material when such use and handling are not in accordance with directions.

**Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only professional handlers may be in the area during application.**

**Do not contaminate water, food, or feed by storage and disposal.**

**DO NOT APPLY DIRECTLY TO WATER, OR TO AREAS WHERE SURFACE WATER IS PRESENT OR TO INTERTIDAL AREAS BELOW THE MEAN HIGH WATER MARK. DO NOT CONTAMINATE WATER WHEN DISPOSING OF WASTE OR EQUIPMENT WASHWATER.**

**Avoid contact with eyes or clothing. Wash thoroughly with soap and water.**

**Container Disposal:**
- DO NOT BURN CONTAINER AND CONTENTS.
- DO NOT BURN CONTAINER AND CONTENTS.
- Burned, stay out of smoke.

** Hers is a violation of Federal Law to use this product in a manner inconsistent with its labeling.**

**Applicators and other handlers who handle this pesticide for any person must be informed by the Worker Protection Standard (WPS) that foraging fire ant workers take back the bait to the mound to feed to the queen.**

**Instructions for Use:**

- Use this product only in accordance with its labeling and with the Worker Protection Standard (WPS) requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural products. It contains requirements for training, decontamination, monitoring and emergency assistance. It also contains specific instructions and exceptions pertaining to the applicators on the label about personal protective equipment (PPE) and the handling, mixing, and application of this product. The applicator must ensure that all consumers of this product are covered by the Worker Protection Standard.

**Notes:**
- For agricultural use only.
- Not for household, lawn, garden, or ornamental use.
- Do not apply directly to water or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of waste or equipment washwater.
- DO NOT USE OR STORE MATERIAL IN OR NEAR ORBITAL NURSERY, COMMERCIAL NURSERY, ANY OTHER STRUCTURE WHERE ANTS MAY ENTER.

**Preparation of Application:**
- **Mound Treatments:**
  - Apply EXTINGUISH® to areas at the rate of 1 to 1.5 pounds of product per acre.
  - Directly into the mound, sprinkle the adjacent areas of the mound, applying evenly in a manner to fill all crevices, and voids or to areas that are inaccessible such as attics, crawlspaces, wall structures or near locations where ants are a problem. Examples include: weep holes, foundation vents, stairs, decks, patios, picnic areas, utility areas, and other areas foundation vents, stairs, decks, patios, picnic areas, utility areas, and other areas of a structure or near locations where ants are a problem.
  - In areas of heavy infestation, repeat applications may be necessary 10 days after initial application.

- **Broadcast Applications:**
  - Apply EXTINGUISH® to areas at the rate of 3-5 tablespoons per mound. *Except in California* apply 0.75 lbs. EXTINGUISH® plus 0.75 lbs. Mix bait products together.

- **Refillable Bait Stations:**
  - EXTINGUISH® may be used in refillable bait stations. Place up to 1 oz of EXTINGUISH® and other bait as directed by the label. For best results, purchase a full stationary of bait products. The ratio of EXTINGUISH® and other bait products may be for a total of 1.5 lbs. of total bait in one bait station.

**Instructions for Use:**

- Use this product only in accordance with its labeling and with the Worker Protection Standard (WPS) requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural products. It contains requirements for training, decontamination, monitoring and emergency assistance. It also contains specific instructions and exceptions pertaining to the applicators on the label about personal protective equipment (PPE) and the handling, mixing, and application of this product. The applicator must ensure that all consumers of this product are covered by the Worker Protection Standard.

**Notes:**
- For agricultural use only.
- Not for household, lawn, garden, or ornamental use.
- Do not apply directly to water or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of waste or equipment washwater.
- DO NOT USE OR STORE MATERIAL IN OR NEAR ORBITAL NURSERY, COMMERCIAL NURSERY, ANY OTHER STRUCTURE WHERE ANTS MAY ENTER.
METHODS OF APPLICATION

1. Individual Mound Treatments

- Treat all visible mounds with 3 to 5 tablespoons of EXTINGUISH® per mound. To treat a mound, sprinkle the adjacent areas of the mound, applying evenly in a manner to modify as specified in the WPS.
- Individual mound treatments may be used to reduce the buildup of fire ant mounds into an area.
- Recommended to prevent the encroachment and subsequent development of new mounds into an area.

**Product Use: Indoor Use

- Use EXTINGUISH® indoors in homes, residences (apartments, nursing homes), commercial buildings and warehouses, and any other structures where entry may be restricted or prohibited access or where the environment is such as to preclude the use of other fire ant treatments.
- Use EXTINGUISH® in the following areas:
  - Basements
  - Bathrooms
  - Closets
  - Garages
  - Kitchens
  - Laundry Rooms
  - Utility Rooms
  - Grounds of residences
  - Foundation vents, stairs, decks, patios, picnic areas, utility areas, and other areas frequented by ants.
- Also for use in non-food/feed areas of institutions, restaurants, commercial buildings and warehouses, and any other structures where entry may be restricted or prohibited access or where the environment is such as to preclude the use of other fire ant treatments.

1. Broadcast Applications

- Broadcast applications of EXTINGUISH® should be applied at a rate of 3.5 tablespoons/1000 ft² using suitable application equipment. Backpack, hand, or motorized mechanical equipment may be used. Broadcasting is recommended to the area around the mound, but it is not necessary to treat the entire area.
- When broadcasting EXTINGUISH®, avoid spraying the application directly onto any plants or other areas where the pesticide is not required.
- Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water, food, or feed by storage and disposal.

EROSION AND DISPOSAL

- Do not contaminate water, food, or feed by storage and disposal.
- Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water, food, or feed by storage and disposal.
- Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water, food, or feed by storage and disposal.
- Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water, food, or feed by storage and disposal.

GENERAL

- Application during heat of the day or when rain is expected within 6 hours of application will reduce the effectiveness of this product. Maximum removal of fire ants will occur if heavy rain is received within 12 hours of application. In cases of heavy rain, repeated applications may be necessary to achieve the same level of control as prior to heavy rain.

Individual mound treatments and broadcast applications may be used to control fire ants on the basis of the amount of bait placed in each application. The application rate should be adjusted to achieve the desired level of control.

In individual mound treatments, the amount of bait placed in each application should be based on the size of the mound. For small mounds, 3 to 5 tablespoons of bait per mound may be used. For larger mounds, 7 to 10 tablespoons of bait per mound may be used. In broadcast applications, the amount of bait placed in each application should be based on the size of the area to be treated. For small areas, 1 to 3 tablespoons of bait per 1000 ft² may be used. For larger areas, 4 to 6 tablespoons of bait per 1000 ft² may be used.

EXTINGUISH® is effective against fire ants that are treated with the bait. However, fire ants that are not treated with the bait may still be present in the area and may continue to cause problems. For best results, it is recommended to use broadcast applications in addition to individual mound treatments to control fire ants effectively.

DIRECTIONS FOR USE

GENERAL INFORMATION

EXTINGUISH® PROFESSIONAL FIRE ANT BAIT (EXTINGUISH®) contains an insect growth regulator (IGR) with specific activity for fire ants. To minimize handling of bait, EXTINGUISH® is designed to be applied in a manner that follows the Worker Protection Standard (WPS) for agricultural workers as outlined in the Worker Protection Standard (40 CFR Part 170). The label PPE requirements may be reduced if the use is consistent with the Worker Protection Standard (WPS) for agricultural workers, Workers Protection Standards (WPS) for agricultural workers, and the pesticide label requirements.

METHODS OF APPLICATION

1. Mound

2. Individual

3. Hopper Blend

4. Refillable Bait Stations

EXTINGUISH® may be mixed with soil or other materials to provide a more suitable holding environment for the fire ant bait.

Note: IGRs (insect growth regulators) are specific activity to fire ants. Fire ants and other insects are not tolerant to IGRs.

EXTINGUISH® is designed to be used on the surface of the soil and does not penetrate the soil. The bait is applied to the soil surface and/or the ground equipment (granular application only). The bait is readily taken up by the fire ant workers and brought back to the colony. This bait is designed to provide a sustained control. It is necessary to follow these directions in order to achieve the best results.

Rate and Timing

EXTINGUISH® is a highly effective bait for fire ant control. It is important to apply the bait at the correct rate and timing. If the bait is applied too soon, the fire ants will not have time to establish a colony. If the bait is applied too late, the fire ants may already have established a colony. The bait should be applied when the fire ants are most active, which is usually in the morning or late afternoon. Your local pest control professional can provide guidance on the best time to apply the bait based on local weather conditions.

Pest Control Professional

For further assistance, contact your local pest control professional or refer to the product label for more information.
